SUMMARY

Data Analyst with a background in Economics, specializing in business performance and operational analytics. Built end-to-end analytical projects using PostgreSQL, Tableau, and Excel to transform large transactional datasets into actionable business insights. Strong foundation in data modeling, data quality, and translating complex analysis into clear, decision-focused recommendations.

PROJECTS

Retail Shrinkage & Inventory Optimization — Bibitor LLC

[Portfolio](#)

- Analyzed 15M+ transactions records across 80 stores, identifying \$199K in annual shrinkage and \$28M in excess inventory, highlighting profitability and working capital risks.
- Found 65% of shrinkage concentrated in four stores, while vendor fulfilment inaccuracies and operational process gaps contributed to inventory imbalances.
- Delivered store-level segmentation and prioritized recommendations through an end-to-end PostgreSQL pipeline using a Raw → Clean → Gold architecture, star-schema modeling, materialized views, and Tableau reporting.

Revenue Risk & Customer Dependency Analysis — Contoso

[Portfolio](#)

- Analyzed multi-country retail transaction data, identifying \$78.7M in revenue at risk while revealing 43.5% revenue dependency on the top 20% of customers, highlighting customer concentration risk.
- Found the Online channel accounted for \$27M in at-risk revenue, while 1,421 declining high-value customers remained within retention reach, helping prioritize retention efforts.
- Delivered customer segmentation and channel/store-level risk prioritization using a Raw → Clean → Gold → Analytics architecture with a customer summary materialized view and analytical views.

Business Performance, Margin & Growth Analysis — Philea

[Portfolio](#)

- Analyzed business performance across 35 stores in 7 countries, identifying \$78M in revenue lost to discounting and \$3M in profit improvement opportunities, pointing to key margin and growth opportunities.
 - Identified Children's as the fastest-growing category, while significant margin differences across countries highlighted opportunities to improve profitability in underperforming markets.
 - Delivered three interconnected dashboards for profitability, margin performance, and growth analysis, supported by a Raw → Clean data model with currency normalization and transaction deduplication.
-

TECHNICAL SKILLS | PostgreSQL • Tableau • Microsoft Excel • Git • GitHub

Core Skills: Data Modeling • Data Cleaning & Validation • EDA • Statistical Analysis

EDUCATION | Bachelor of Science in Economics | Virtual University of Pakistan | Mar'2026

CERTIFICATIONS | Google Data Analytics Professional Certificate | Coursera
